

LT-CLM-1-1/4

Through Type Feeder Clamp

The LT-CLM-2-11/4 Through Type Feeder Clamp is a durable and reliable mounting solution designed to securely hold and support RF coaxial feeder cables in wireless communication systems. Engineered for easy installation and long-term outdoor performance, this clamp is typically used in telecom towers, base stations, and antenna masts. Its robust construction ensures optimal cable alignment, minimizes signal loss due to cable movement, and protects cables from mechanical stress and environmental factors.

Features :

- Designed for 1-1/4 inch (32mm) RF coaxial feeder cables
- High-strength UV-resistant plastic for long-term outdoor durability
- Corrosion-resistant hardware for enhanced reliability in harsh environments
- Easy and quick installation with standard mounting hardware
- Reduces mechanical stress and cable movement to prevent signal loss
- Suitable for use in telecom towers, base stations, and antenna systems

Key Highlights

- UV-resistant & corrosion-proof materials with stainless steel hardware.
- Wide temperature range for outdoor use.
- Weatherproof & fire-retardant design.
- RoHS compliant and meets telecom standards.
- High mechanical strength for wind and vibration.
- Lightweight yet durable, some versions stackable.

Specifications

Suitable Cable	1-1/4" flexible RF cable
Cable Number	1
Plastic Material	Modified PP
Metal Material	Stainless steel (304)
Operating Temperature	-40C~70C
Installation temperature	-40C~70C
RoHS	YES

Applications

- Supports round and elliptical cable profiles
- Stackable for multi-cable setups
- Vibration-resistant for high-wind areas
- Maintains proper cable bend radius
- Lightweight and easy to handle
- Weatherproof and fire-retardant materials
- Compliant with telecom industry standards
